

# Balancing the Books: How Does ChatGPT Handle Accounting?

Can language learning AI chatbots like ChatGPT outperform students in answering accounting questions?

This study evaluates ChatGPT's performance on assessments using various examination question types, grading standards, and exam conditions.

The study ultimately finds that while students overwhelmingly outperform ChatGPT, the AI performs more comparably in some areas like multiple-choice, or True/False question formats.

It is also important to note that while students individually outperformed ChatGPT by a significant percentage, the ChatGPT average overall was higher by just over 11%.

---

## MAJOR TAKEAWAYS:

- ChatGPT responses fall short of students in nearly all scenarios
- Performance differs based on question type
- ChatGPT, while risky, can provide learning support for students when studying

---

## WHO NEEDS TO KNOW:

- Educators
- University Administrators
- Students
